

Alberto Maria Merlo - Curriculum vitae

Alberto M. Merlo started his professional career in 1993 and across the years he undertook research activities in the fields of glazing design, non-destructive testing, metallurgy of light material alloys, sensing elements and automotive interior, with the special aim of reducing the overall mass of the vehicle, improving the product performance and introducing new functionalities.

Since year 2013 he has devoted himself to the innovation in the domain of the thermal module and the engine auxiliaries for both traditional and alternative traction drive train vehicles.

During his whole professional career he managed and participated in several international collaboration research projects in all the fields of his scientific and technical interest and published more than 20 articles and conference papers.
