

1. TITLE

Gastone Benefit Estimation at Vehicle Level

2. NAME OF THE SPEAKER

Emilio Navarro Peris

3. CURRICULUM

Emilio Navarro Peris obtain his degree in Physics by the University of Valencia in 2000. Later on, he obtains master's degrees in theoretical physics and mechanical engineering and he get his PHD. in Mechanical Engineering by the Technical University of Valencia in 2006. Since then, he has been working as a researcher in the Technical University of Valencia and in the University of Malaga in the field of Energy efficient systems involved in project financed by public and private institutions. From all these activities, he has published more than 30 research articles in international journals mainly related to the fields of HVAC systems and biofuels. Currently, he has the position of assistant professor in the Applied Thermodynamics Department in the Technical University of Valencia and is a researcher in the Thermal Area of the Institute for Energy Engineering at the same university.
