

Rainer Gietl

Rainer Gietl, born in 1983, graduated with Diploma in Electrical Engineering on focus Microelectronics in the year 2008 at the University of Applied Science in Regensburg, Bavaria.

He started his career at the company Robert Bosch, close to Stuttgart, within the team for Generic Development of Electrical Brakes for passenger cars. He was circuit designer and responsible for the electrical power components on Electrical-Control-Unit, specifically for the actuation of the DC-Motor.

Since 2014 he is working at Continental Automotive GmbH in Regensburg in the Advanced Development Department at the Business-Unit Powertrain on predevelopment projects. He is involved in several areas, like in particular the 48V-Power-Net and its applications. Rainer has expertise on saving energy via smart controlling of electrified components on powertrain-level.
